The first MINI "Made in Germany": BMW Group Plant Leipzig prepares production of the all-electric MINI Countryman.

P90496134

The new, fully electric MINI model generation continues to grow: in 2023, production of the new MINI Countryman will begin at the BMW Group plant Leipzig. The crossover model will be offered with both pure electric drive and combustion engines. Preparations for the start of production of the first MINI "Made in Germany" are already in full swing.

Leipzig. MINI's fully electric future will start in 2023 with, among other things, the new MINI Countryman at the BMW Group plant in Leipzig. This will be the first time that a MINI model is produced entirely in Germany. The locally emission-free all-rounder is an excellent fit for the BMW Group's sustainable production site in Leipzig, one of the most modern and sustainable automotive factories in the world. As the company's pilot project for establishing a "green plant," a long-term, sustainable strategy for energy generation and consumption comes into play here.

"We are looking forward to handing over the first MINI "Made in Germany" to our customers. The new, all-electric MINI Countryman demonstrates what the brand stands for: electrified go-kart feeling and a strong focus on a minimal environmental footprint," says Stefanie Wurst, Head of MINI.

Petra Peterhaensel as Plant Director and Sonja Hengstler as Project Manager for the new MINI Countryman are responsible in Leipzig for the transformation toward more electromobility and sustainable production of the E-components as well as the entire vehicles. A core workforce of 5,600 employees produces around 1,000 vehicles every day. The new MINI Countryman comes off the production line in Leipzig together with the BMW 1 Series, BMW 2 Series Gran Coupé and BMW 2 Series Active Tourer. This makes the location the first plant

at which vehicles of the BMW and MINI brands are manufactured together, once again demonstrating maximum flexibility.

Electromobility as a driver.

The expansion of electromobility is an integral part of the BMW Group's sustainability strategy. Today, one in five MINI models is already electrified, a testament to MINI fans' enthusiasm for locally emission-free driving fun. The next

P90496156

major milestone and stimulus for the plant is the production of the new MINI Countryman, which will roll off the production line in Leipzig from the end of this year. The high-voltage batteries for the all-electric MINI Countryman will then come from the plant's own production facilities.

To this end, the BMW Group is expanding its capacities for e-component production at the Leipzig site by eight production lines by 2024 and investing more than 800 million euros. The future production area of 150,000 square meters on which E-components will be manufactured represents a sustainable investment in the future viability of the Leipzig plant. The expansion is associated with job security and even job growth. By 2024, more than 1,000 employees are to be employed in E-component production.

Long-term commitment to sustainability.

Sustainability is in the genes of the plant Leipzig. Part of the energy required for automotive production can be generated by four wind turbines 190 meters high directly on the Leipzig plant site. In 2021, 21.9 GWh of electricity was

generated from wind power. This corresponds to the annual electricity consumption of over 5,000 3-person households. Since 2017, the electricity generated can be temporarily stored in the battery storage farm in up to 700 high-voltage batteries from BMW i3 models.

P90496139

"Our Leipzig vision is the complete decarbonization of production by replacing fossil fuels with hydrogen. At the BMW Group plant in Leipzig, we are the first

automotive plant in the world to use a newly developed burner technology in our paint shop that can use green hydrogen instead of natural gas. Hydrogen has already been used in plant logistics since 2013. Today, five hydrogen filling stations provide energy for over 130 fuel cell-powered industrial trucks, the largest fleet in Germany," emphasizes Plant Director Petra Peterhaensel.

As the brand's largest model, the all-electric MINI Countryman leads the new MINI family into an era of locally emission-free electromobility. The transformation to an all-electric brand by 2030 begins with this model generation. Thanks to space-saving components such as the particularly flat high-voltage battery, which is also produced at the BMW Group Plant Leipzig, the MINI Countryman will offer additional space and even greater comfort in the future.

Fuel consumption, CO₂ emission figures and power consumption were measured using the methods required according to Regulation VO (EC) 2007/715 as amended. They refer to vehicles on the German automotive market. For ranges, the NEDC figures take into account differences in the selected wheel and tyre size, while the WLTP figures take into account the effects of any optional equipment.

All figures have already been calculated based on the new WLTP test cycle. NEDC figures listed have been adjusted to the NEDC measurement method where applicable. WLTP values are used as a basis for the assessment of taxes and other vehicle-related duties which are (also) based on CO₂ emissions and, where applicable, for the purposes of vehicle-specific subsidies. Further information on the WLTP and NEDC measurement procedures is also available at www.bmw.de/wltp.

For further details of the official fuel consumption figures and official specific CO₂ emissions of new cars, please refer to the "Manual on the fuel consumption, CO₂ emissions and power consumption of new cars", available at sales outlets free of charge, from Deutsche Automobil Treuhand GmbH (DAT), Hellmuth-Hirth-Str. 1, 73760 Ostfildern-Scharnhausen and at <https://www.dat.de/co2/>.

The BMW Group

With its four brands BMW, MINI, Rolls-Royce and BMW Motorrad, the BMW Group is the world's leading premium manufacturer of automobiles and motorcycles and also provides premium financial and mobility services. The BMW Group production network comprises over 30 production sites worldwide; the company has a global sales network in more than 140 countries.

In 2022, the BMW Group sold nearly 2.4 million passenger vehicles and more than 202,000 motorcycles worldwide. The profit before tax in the financial year 2021 was € 16.1 billion on revenues amounting to € 111.2 billion. As of 31 December 2021, the BMW Group had a workforce of 118,909 employees.

The success of the BMW Group has always been based on long-term thinking and responsible action. The company set the course for the future at an early stage and consistently makes sustainability and efficient resource management central to its strategic direction, from the supply chain through production to the end of the use phase of all products.
